Topologia: le interfacce non sono configurate

Topologia: i MAC address sono legati all'hardware

MAC addresses

Configurazione IP

Una sola network: 10.0.1.0/24

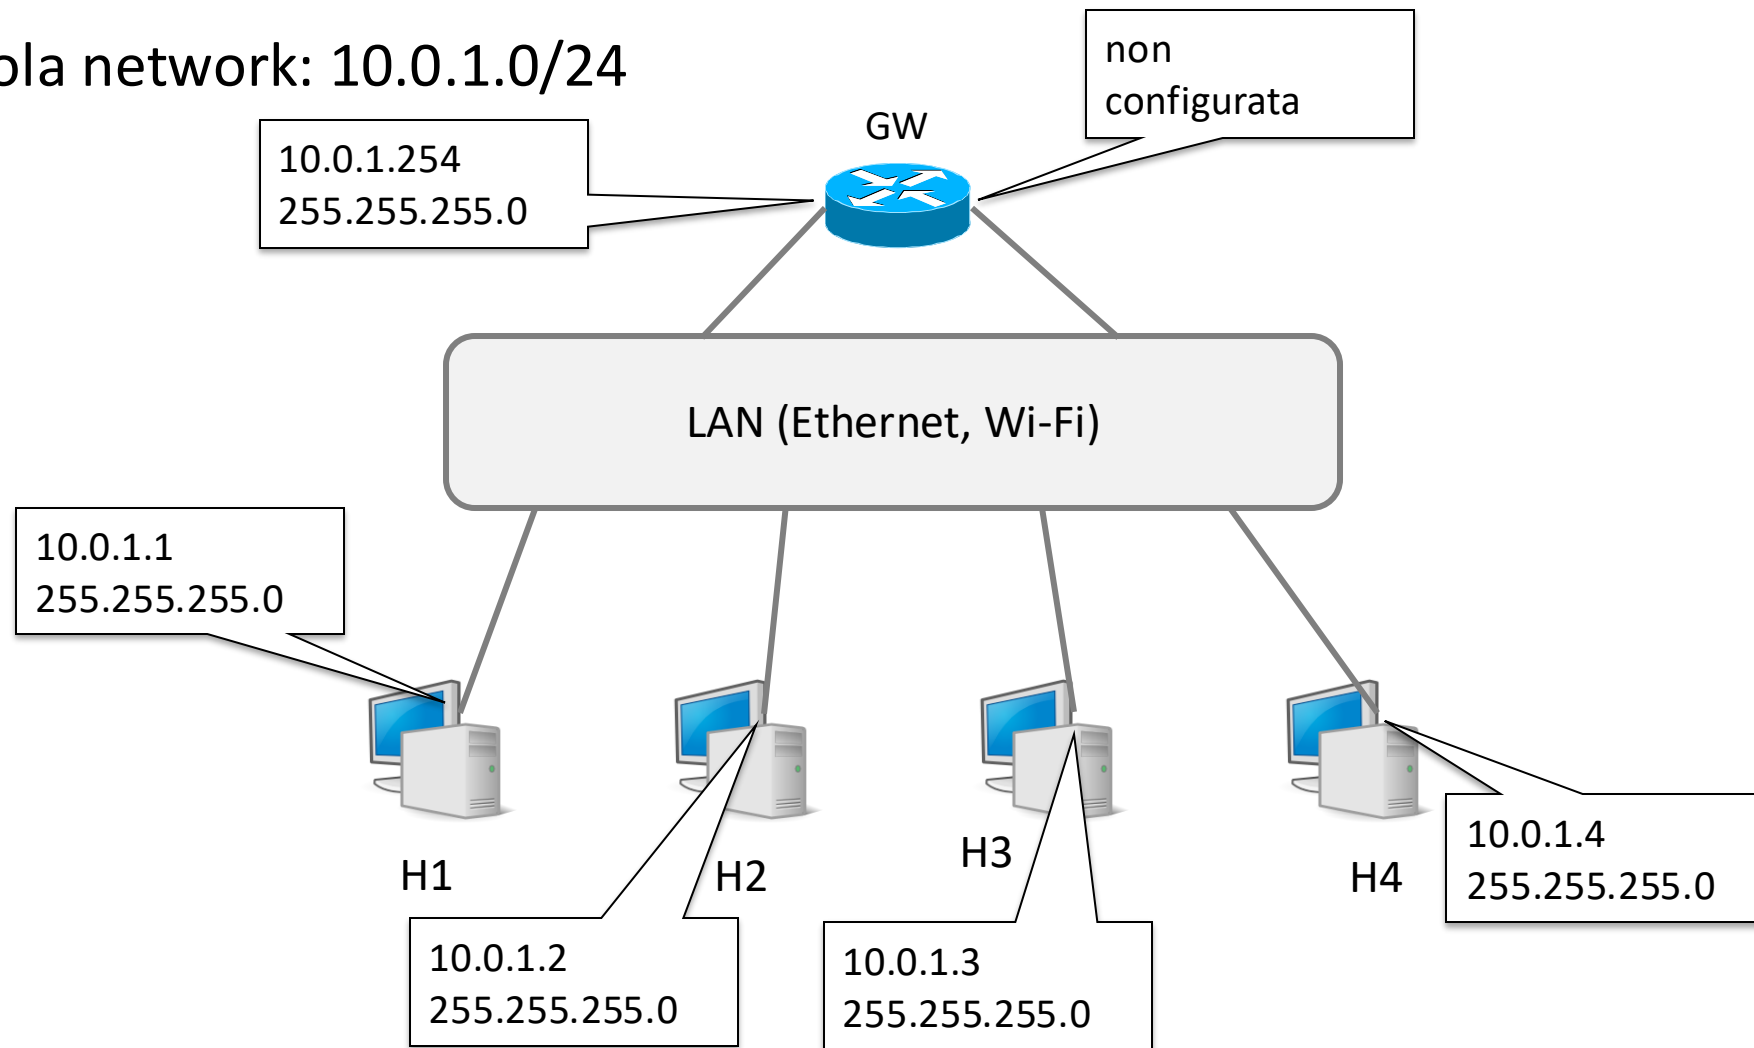

Tabella di instradamento

- Uguale per tutti gli host
- Contiene informazioni solamente sulla network di appartenenza
- Viene compilata in modo automatico a partire dalla configurazione

Destination	Netmask	Gateway	Interface
10.0.1.0	255.255.255.0	on-link	eth0

Raggiungibilità

Vedi ping_H1_H2.pcapng

Da H1 a H2

1. Da H1 arp request verso 10.0.1.2
2. H1 scopre così che il Mac address di 10.0.1.2 è 00:00:00:12:12:12
3. H1 invia un pacchetto data link al MAC address 00:00:00:12:12:12 con indirizzo di destinazione IP 10.0.1.2
4. H2 riceve il pacchetto dal data link e lo elabora a livello IP

Raggiungibilità

Configurazione interfaccia

```
1: lo: <LOOPBACK> mtu 65536 qdisc noop state DOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
18: veth0@if17: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc noqueue state UP group default qlen 1000
    link/ether 00:00:00:11:11:11 brd ff:ff:ff:ff:ff:ff link-netnsid 0
```

Manca la configurazione IP quindi

Kernel IP routing table

-------------	---------	---------	-------	--------	-----	-----	-------

Se aggiungo la configurazione IP (indirizzo e netmask)

```
1: lo: <LOOPBACK> mtu 65536 qdisc noop state DOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00

Chi può parlare con chi

Configuriamo anche la seconda interfaccia

Vedi ping_G1.pcapng
ping_G1.pcapng

Utilizzo il numero IP 10.0.1.253

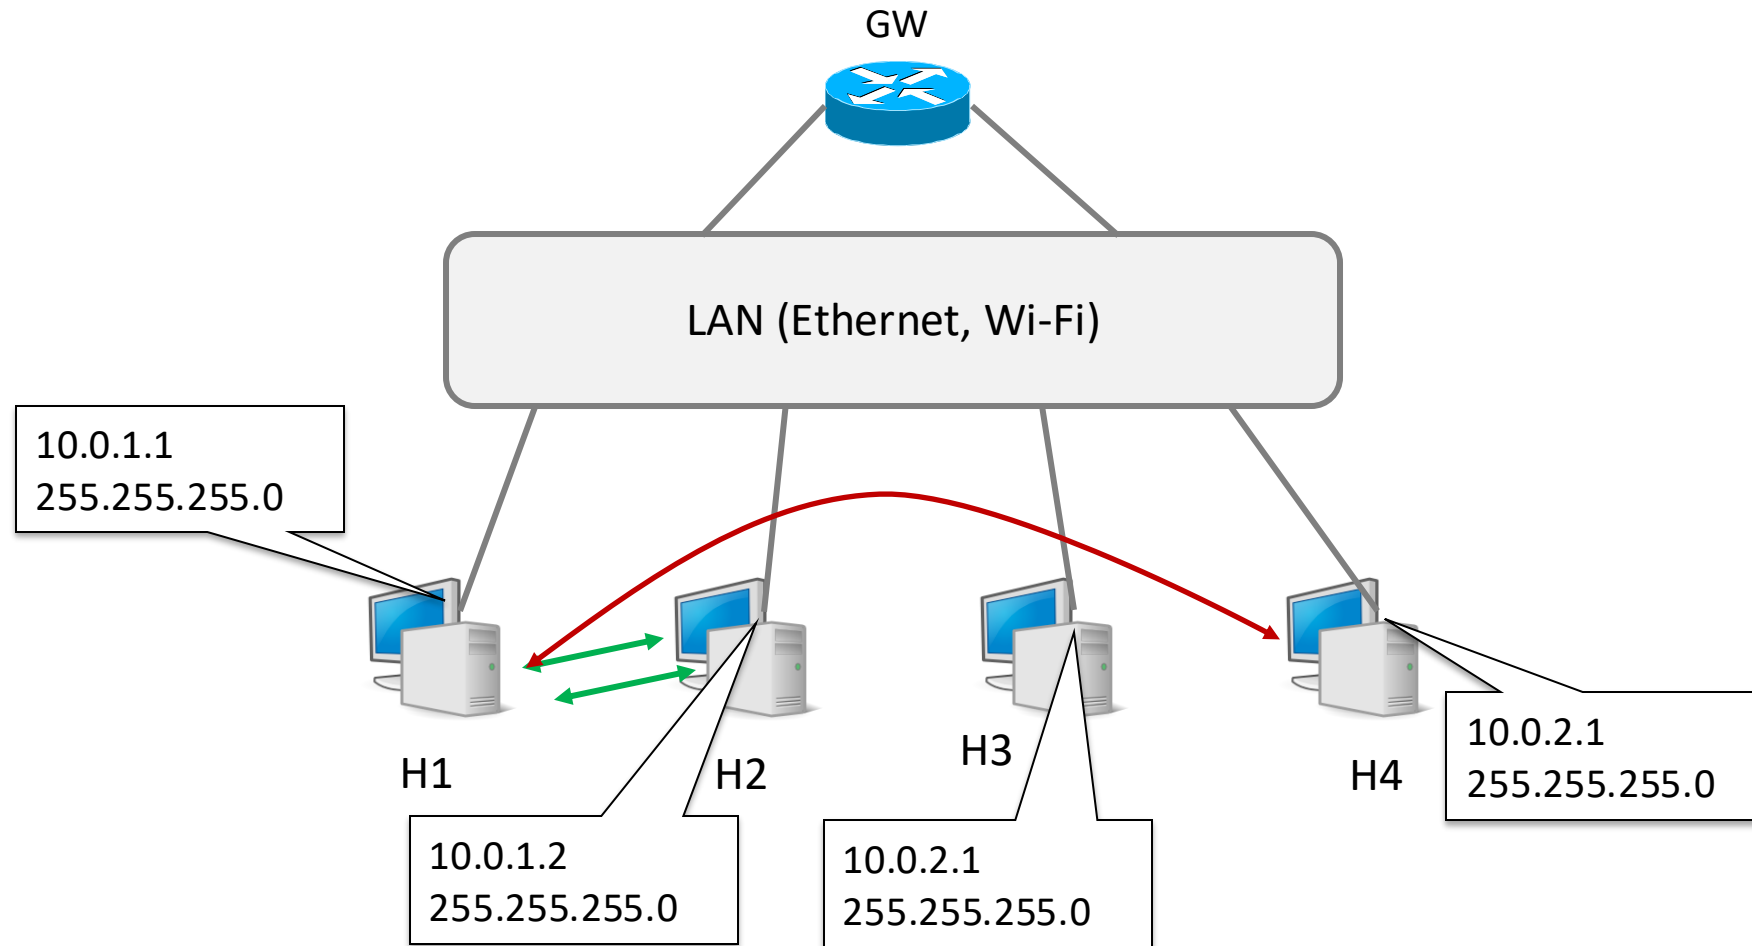

```
1: lo: <LOOPBACK> mtu 65536 qdisc noop state DOWN group default qlen 1000
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
40: veth1@if39: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc noqueue state UP group default qlen

    link/ether 00:00:00:aa:aa:aa brd ff:ff:ff:ff:ff:ff link-netnsid 0
    inet 10.0.1.254/24 scope global veth1

42: veth2@if41: <BROADCAST,MULTICAST,UP,LOWER_UP> mtu 1500 qdisc noqueue state UP group default qlen

La tabella di instradamento contiene 2 righe identiche, dovute rispettivamente alla configurazione delle interfacce veth1 e veth2

Non ci sono indicazioni per 10.0.2.0 ?

Aggiungiamo un gateway di default

Vedi ping_GW_noroute.pcapng

C'è consapevolezza del percorso di andata, ma non di quello di ritorno

Raggiungibilità

Vedi ping_GW_OK.pcapng

Configuro correttamente anche i calcolatori della network 10.0.2.0/24

Kernel IP routing table

Destination	Gateway	Genmask	Flags	Metric	Ref	Use	Iface
0.0.0.0	10.0.2.254	0.0.0.0	UG	0	0	0	veth0

Ed ora finalmente c'è la raggiungibilità
